

PurePrep Midi - Medium-Throughput Nucleic Acid Extraction System

CONSISTENT RESULTS WITH MEDIUM THROUGHPUT EXTRACTION

The PurePrep Midi is an open system to reduce hands-on time and to increase the throughput by automating the purification of nucleic acids from a wide range of sample matrices.

No labour-intensive & manual extraction. Enabling fast simultaneous extraction of up to 32 samples.

With easy reproducibility of protocols, the system guarantees consistent results for multiple runs. Its small benchtop design is ideal for users with limited lab space, but high sample throughput.

- Utilizes magnetic bead separation technology & smart modified tip combs for non-magnetic extraction of HMW and UHMW DNA
- Touchscreen interface for easy usage
- Fully editable programs - optimal protocols - open system
- Accurate temperature control system ($\pm 1^{\circ}\text{C}$)
- UV lamp sterilization to avoid cross-contamination
- optimized for usage with innuPREP Extraction Kits
